

Transwide in the Top 100 Annual List of Software and Technology Providers from US publication Food Logistics

Brussels, 17 December 2014 – Wolters Kluwer Transport Services, the European leading provider of Transport Management Software and Services, announced that its TMS solution Transwide is being named as one of the Top 100 Software and Technology suppliers in the annual ranking of *Food Logistics*, the US publication dedicated exclusively to the global food and beverage supply chain. This is the second recognition from a US trade journal that Transwide has received in the past few months, following on the heels of the Top 100 Logistics IT Provider awarded by *Inbound Logistics* in May.

A strong acknowledgment

The bulk of the Transwide TMS customers are in the FMCG / Food & Beverage sectors and industrial goods, where Wolters Kluwer Transport Services has a track record of quick and simple deployment and generating rapid ROI throughout the world. Transwide has proven extremely successful in helping Food & Beverage customers meet industry and logistics challenges such as dwindling capacity for over-the-road (truck) transportation, increased government regulation, and new Food Transport Safety regulations standards.

“We are honoured to see our Transwide TMS recognized by the Food Logistics magazine”, said Fabrice Maquignon, Managing Director of Wolters Kluwer Transport Services. *“For the second time in less than 6 months, we are being recognized for our continuing investments to develop our Transwide solution, and acknowledged for our dedication to increasing added value to FMCG / Food & Beverage companies. We intend to deliver additional market-leading enhancements in the very near future.”*

Substantial benefits for the Food & Beverage industry

For more than a decade, the editors of *Food Logistics* have profiled software and technology providers that hold influential roles in the global food and beverage supply chain. Their products benefit the industry in multiple ways, from reducing food waste and extending shelf life, to facilitating safe and sanitary transportation of product while assuring regulatory compliance.

“The impact of software and technology on the global food supply chain is truly profound,” emphasizes Lara L. Sowinski, Editor-in-Chief at Food Logistics. *“Software solution providers, equipment manufacturers and numerous technology innovations are supporting growth in our industry while concurrently lowering operating costs, improving productivity and enhancing visibility from farm to fork.”*

Companies who earned a spot on the FL100+ list are featured in the November/December 2014 issue of *Food Logistics*, as well as online at www.foodlogistics.com.
